How can I configure the Exception Site List?

This article applies to:

- **Java version(s):** 7.0

The **Exception Site List** feature is being introduced in the release of Java 7 Update 51. By application URL to the Exception list allows users to run Rich Internet Applications (RIAs) t would normally be blocked by security checks.

Listed below are cases which will allow applications to run by adding the application url to t exception site list:

- If application is not signed with a certificate from trusted certificate authority.
- If application is hosted locally.
- Jar file not having the Permission manifest attribute.
- Application signed with an expired certificate.
- Certificate used to sign the application cannot be checked for revocation.

Manage the Exception Site List

The exception site list is managed in the **Security** tab of the **Java Control Panel**. The list shown in the tab. To add, edit or remove a URL from list, Click **Edit Site List** and follow the directions shown.

Add a URL

- Click on the **Edit Site List** button.
- Click the **Add** in the Exception Site List window.
- Click in the empty field under Location field to enter the URL.
  Example: http://myexample.com **(Note: URL should begin with http:// or https://**
- Click **OK** to save the URL that you entered.
- Click **Continue** on the Security Warning dialog.

Edit a URL

- Double click the URL that you want to edit in the Exception Site List window.
- Make change to the URL.
- Click **OK** to save the changes.

Remove a URL

- Click the URL that you want to remove in the Exception Site List window.
- Click **Remove**.
- Click **OK** to save your change.

  Note: If an active deployment rule set is installed on the system, the deployment rul precedence over the exception site list. The exception site list is considered only wh default rule applies. See **Deployment Rule Set** (http://docs.oracle.com/javase/7/docs/technotes/guides/jweb/security/deployment_rul for more information about deployment rules.
